

AMENDMENT TO THE SPECIFICATION:

In accordance with the Revised Rules under 37 C.F.R. 1.121, please amend the paragraphs of the specification shown below:

Please amend the 2nd paragraph on page 7 of the specification as follows:

On the flexible printed circuit board, there are transmission lines with impedance elements for making impedance matching between the printed circuit board 30 and the photoelectric elements 10 and 20. The flexible printed circuit board and the photoelectric elements are connected by flat contact such that the flexible printed circuit board can be extended from said pins and parallel to the optical axis of the photoelectric elements. No sharp bend occurs during assembly so as to increase the reliability of the module. The construction is simple, easy to be fabricated and lower of cost.
